

PONNY KIDS AND THEIR PROJECTS

January 2014

Ecology – Experiments

This Eco lesson was really exciting again. Tigers did some experiments and that is what they like a lot. Of course they learned something about nature as well.

Tigers got the lemons...

They had to squeeze them...

Finally we can write the msg...

Time for second experiment...

Really! The egg raises up!

Paper baking...

Here we go!

We called the first experiment „Secret letter“. The special thing about this secret letter is that i this one is a natural secret letter because it was written by lemon. The lemons were given to the Tigers. Each of them got half o fit and they were supposed to squeeze it to get the liquid out o fit. And that was the secret invisible ink. Next Monday we put the secret letters in to the oven to maket he writing and pictures visible. It was great fun!

The second experiment was about sea water. We did this to explain to Tigers why we can swim so easily in sea salt water. They put raw egg in to the jug full of water and added spoons of salt. It caused that the egg rised to the surface. And that is what the salt causes! Now it all makes a bit more sence!
